**Question 1**

Correct

Note de 1,00 sur 1,00

What's an opcode in ethereum?

- ☐ a. codes used to encrypt messages
- ☒ b. the code of an operation in a smart contract ✓
- ☐ c. the price of an operation

**Question 2**

Correct

Note de 1,00 sur 1,00

What happens when the amount of gas allocated to the execution of a smart contract is too large

- ☐ a. Contract execution stops
- ☒ b. Remaning gas is sent back to the sender ✓

**Question 3**

Correct

Note de 1,00 sur 1,00

Among these proposals, which bitcoin limitation does ethereum tackle with?

- ☐ a. The risk of a 51 percent attack
- ☐ b. the weakness of the underlying crypto-algorithms
- ☒ c. The limit in bitcoin blockchain states ✓
- ☒ d. The fact that bitcoin script doesn't know block metadata (nonce, hash) ✓
- ☐ e. lack of decentralization

**Question 4**

Correct

Note de 1,00 sur 1,00

The whole blockchain state is stored in each block

Veillez choisir une réponse.

- ☒ Vrai ✓
- ☐ Faux

**Question 5**

Correct

Note de 1,00 sur 1,00

Which transaction components are specific to ethereum?

- ☐ a. {
- ☒ b. value of the Gasprice ✓
- ☐ c. transaction feeds
- ☐ d. the maximal amount of instruction to run
- ☒ e. the reference to the uncles ✓
- ☐ f. the reference to the grandfathers

**Question 6**

Correct

Note de 1,00 sur 1,00

Which proposition(s) on ethereum data storage are true?

- ☐ a. all the data is encrypted
- ☐ b. storage is cheaper than in traditional cloud solutions
- ☒ c. the probability that data stored in the blockchain decreases exponentially with the number of validated blocks after block propagation ✓
- ☐ d. Ethereum can be used to store big data

**Question 7**

Correct

Note de 1,00 sur 1,00

What are UTXO?O?

- ☒ a. Unspent transactions ✓
- ☐ b. public/private key pairs
- ☐ c. un-added blocks

**Question 8**

Correct

Note de 1,00 sur 1,00

Assuming that there are 200 validators each staking 32 ETH, how many validators are required to attest a checkpoint?

Réponse : 134

**Question 9**

Correct

Note de 1,00 sur 1,00

What are the pros and cons for POS?

- ☐ a. Proof-of-stake is less complex to implement than proof-of-work
- ☐ b. Proof-of-word offers greater crypto-economic security than proof-of-stake
- ☐ c. Staking pools requires 32ETH to stake
- ☒ d. POS is younger and less tested than POW
- ☒ e. POS requires executing more programs

**Question 10**

Partiellement correct

Note de 0,50 sur 1,00

What is POS consensus?

- ☐ a. When a general agreement has been reached.
- ☒ b. When at least 66% of the nodes on the network agree on the state
- ☐ c. When at least 51% of the nodes on the network agree on the state
- ☐ d. When transactions are received by the validator node
- ☐ e. When at least 25% of the nodes on the network agree on the state

**Question 11**

Correct

Note de 1,00 sur 1,00

What are the consequences of the DAO exploit?

- ☐ a. increase in the value of Ether
- ☒ b. a decrease in the value of Ether
- ☒ c. a hard-fork
- ☐ d. discontinuation of ethereum smart contract technology

**Question 12**

Correct

Note de 1,00 sur 1,00

The DAO was a success

Veillez choisir une réponse.

- ☐ Vrai
- ☒ Faux ✓

**Question 13**

Correct

Note de 1,00 sur 1,00

Which claims were used in the hard-fork dispute?

- ☒ a. code is law ✓
- ☒ b. attacker has respected DAO principles ✓
- ☐ c. life is life
- ☐ d. law is code
- ☒ e. attacker has violated DAO principles ✓
