

Statut	Terminée
Commencé	mercredi 10 juin 2026, 13:49
Terminé	mercredi 10 juin 2026, 13:53
Durée	4 min 25 s
Points	13,00/13,00
Note	10,00 sur 10,00 (100%)

Question 1

Terminé

Note de 1,00 sur 1,00

Among these proposals, which bitcoin limitation does ethereum tackle with?

- ☐ a. The risk of a 51 percent attack
- ☐ b. the weakness of the underlying crypto-algorithms
- ☒ c. The limit in bitcoin blockchain states
- ☒ d. The fact that bitcoin script doesn't know block metadata (nonce, hash)
- ☐ e. lack of decentralization

Question 2

Terminé

Note de 1,00 sur 1,00

What are the account types of Ethereum?

- ☒ a. Smart contract accounts
- ☐ b. bank accounts
- ☐ c. ether accounts
- ☒ d. user account
- ☐ e. oracle accounts

Question 3

Terminé

Note de 1,00 sur 1,00

who runs smart contracts?

- ☐ a. Message sender
- ☐ b. Message receiver
- ☒ c. Miners

Question 4

Terminé

Note de 1,00 sur 1,00

Among these proposals, which bitcoin limitation does ethereum tackle with?

- ☒ a. Lack of Turing complete script language
- ☒ b. The fact that bitcoin scripts don't know how much is exchanged
- ☐ c. Underlying monetary instability
- ☐ d. Proof of work slowness

Question 5

Terminé

Note de 1,00 sur 1,00

What happens when the amount of gas allocated to the execution of a smart contract is too large

- ☐ a. Contract execution stops
- ☒ b. Remaning gas is sent back to the sender

Question 6

Terminé

Note de 1,00 sur 1,00

Which propositions(s) on ethereum code execution are true?

- ☐ a. smart contracts are executed by a single node
- ☐ b. Execution is fast
- ☐ c. Ethereum is well suited to complex algorithms
- ☒ d. code must be deterministic

Question 7

Terminé

Note de 1,00 sur 1,00

What are UTXO?O?

- ☒ a. Unspent transactions
- ☐ b. public/private key pairs
- ☐ c. un-added blocks

Question 8

Terminé

Note de 1,00 sur 1,00

What happens when you stack 32 ETH?

- ☐ a. Faster that POW
- ☒ b. Less electricity is required
- ☐ c. Less required Disk Size
- ☒ d. Can recover from 51% attack
- ☐ e. Run faster (on specialized hardware)

Question 9

Terminé

Note de 1,00 sur 1,00

What were the issues with proof of work?

- ☒ a. tendency of centralization
- ☒ b. high barrier to entry
- ☐ c. Lack of scalability
- ☐ d. Lack of security
- ☐ e. Slowness

Question 10

Terminé

Note de 1,00 sur 1,00

What are the pros and cons for POS?

- ☐ a. Proof-of-stake is less complex to implement than proof-of-work
- ☐ b. Proof-of-word offers greater crypto-economic security than proof-of-stake
- ☐ c. Staking pools requires 32ETH to stake
- ☒ d. POS is younger and less tested than POW
- ☒ e. POS requires executing more programs

Question 11

Terminé

Note de 1,00 sur 1,00

The DAO was a sucess

Veillez choisir une réponse.

- ☐ Vrai
- ☒ Faux

Question 12

Terminé

Note de 1,00 sur 1,00

Exploit vector used in the DAO was known

Veillez choisir une réponse.

- ☒ Vrai
- ☐ Faux

Question 13

Terminé

Note de 1,00 sur 1,00

In a hard-fork, which blockchain principle is violated?

- ☐ a. Consensus algorithm
- ☐ b. Transaction pseud-anonymity
- ☒ c. Transaction immutability
- ☐ d. Decentralization
